

### OEM FIT, FUNCTION AND QUALITY

- Guarantees seamless integration with the vehicle's existing systems for optimal performance.
- Automated conveyor system provides uniform product quality.

### PRECISION ENGINEERING

- On average, internal passages are 1mm in diameter or less, requiring precise manufacturing to ensure accurate sizing that matches OEM fit and function.
- Computer guided framing positions tubes, fins and manifold components, eliminating risk of warping malleable aluminum.
- All metal components are coated with a non-corrosive protective lacquer.
- Automated laser welding provides controlled, secure and smooth bonds.
- Proprietary alloy materials used for bottom railing to reduce damage from overheating, impact, and corrosion.

### ENHANCED AFTERMARKET REPLACEMENT DESIGN

- Parallel flow condenser replacement available for high failure rate applications with OEM piccolo and serpentine condenser.
- New drier and filter included with condenser for applications with OEM condensers with drier attachment.

The condenser cools and condenses high-pressure refrigerant gas, releasing heat and transforming it into a high-pressure liquid, which is then routed to the evaporator. This process is essential for efficiently cooling the interior of the vehicle and maintaining the overall effectiveness of the air conditioning system.

### SUPERIOR QUALITY CONTROL SYSTEM

- Dedicated manufacturing partners cater to our rigorous quality requirements, enhancing tools, equipment and processes to ensure the highest industry standards.
- Our quality control system includes robotic computer checks and manual inspections by skilled professions to ensure product excellence.
